

Standards Committee List of Ideas of Criteria  
For Reviewing what is Necessary for VoIP Telephony System  
As of February 5, 2010

1. Must comply with Coser 7710- Managed Computer Services-  
for aidability. On essence, this includes:
  - Does it integrate with the current Standards Committee approved infrastructure and place your telephone system on the same Ethernet data network as your data system.
  - Is it cost effective? - does it utilize existing BOCES supported infrastructure?
  - It cannot supplant or degrade BOCES operated services.
2. Considerations for interconnecting systems, providing multimedia rich enhancements to the phone system to allow the existing infrastructure to be utilized.
3. Does it integrate well with the current electronic communication system by Erie 1 (Lotus Notes at this time)
